

# IMPACT OF ANIMAL AGRICULTURE ON CLIMATE

# ABOUT US

**At Climate Diet, we shed light on a critical, yet often-overlooked climate change culprit—animal agriculture. Recognized as the second-largest producer of human-made greenhouse gas emissions, animal farming is also the leading cause of deforestation, pollution, biodiversity loss, and soil erosion.**

**[climatediet.org](https://climatediet.org)**

Animal farming for instance has disastrous effects on the climate responsible for the emissions of methane and carbon dioxide. it leads to deforestation, use of water, and loss of the earth's carrying capacity yet a significant amount of wastes and pollution is generated.
